HOUSE

Breakfast

Good Food, Good Mood!

Our breakfast includes local organic products, in order to stimulate the national economy and the growth of local producers, as part of the “Fair Trade Market” movement.

Buffet? No way!

Enjoy breakfast in your apartment with our "Do It Yourself" concept. In the fridge, you will find our organic delights bought from local producers, and in the morning, we dare to leave fresh bread on the door handle. This also helps us to minimize the food waste.

Re habilitate

We embrace the Past

Buildings refurbishment is one of the most daring and ingenious architecture and engineering jobs. It gives us the opportunity, when intervening, to reinvent and be part of the building's history. It also reduces the carbon footprint, reusing resources already existing in the buildings.

This historic building from the 18th century has been renovated, maintaining and preserving many of its original elements and, at the same time, it has been modernized to the current standards of comfort. In the reconstruction of the building, noble and durable materials were used, such as wood and marble. Some furniture was reused and restored by local artisans.

Water

Glass Bottles

Plastic Bottles?

What are those?

At Dare Lisbon House we provide every apartment with personalized glass bottles, which we fill with tap water that we filter ourselves.

Shower Water

Cold facts!

Did you know we use approximately 180 liters of water in a 15 minute shower? That's why at Dare Lisbon House we control the hot water usage, giving each apartment a 20 min. hot water supply every 2 hours. Every apartment has its own water heater.

Re cycling

It's very important to us to be as environmentally conscious as we can.

Recycling conserves resources, saves energy, reduces landfill and helps protect the environment.

Reduce

Reuse

Recycle

“ THE BIGGEST THREAT TO OUR PLANET, IS THE BELIEF THAT SOMEONE ELSE WILL SAVE IT ”

—
ROBERT SWAN

Only good energies!

Not only the building refurbishment was environmentally conscious, but there's also a lot of things we do inside our house that help our planet. We opted for a minimalist decor without curtains and rugs, taking into account our allergy-sensitive guests.

From thermally insulated windows, LED lamps, water flow reducers to the choice of highly energy-efficient appliances, in order to reduce electricity consumption. Each apartment is autonomous, and has an independent air conditioning system.

Dare is our House and the Earth, our Home

Eco-Friendly Cleaning Products

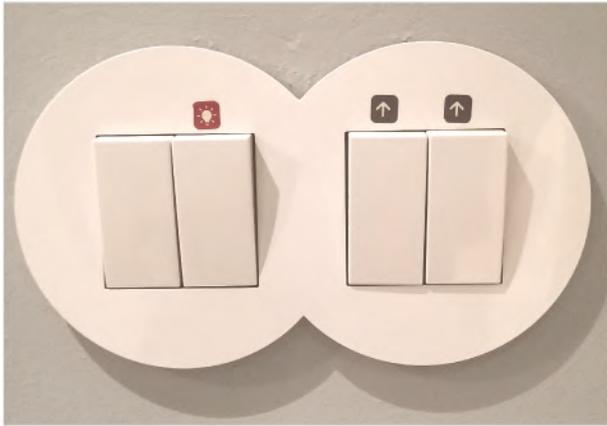

The products are made from vegetable based formulas. There is less risk of allergies, toxicity and it doesn't harm the environment. All of the products are bought in bulk and the bottles are reusable.

Natural-origin amenities

The entire line has been formulated with organic and natural ingredients and designed to have a minimum environmental impact. It's not only the best choice for our guests, but for the environment as well.

Help us save the environment!

If you don't need it on, turn it off!

How many times do we leave the house and leave some lights on?

Perhaps too many times.

Electricity production has a huge impact on the environment, so we should avoid any waste.

Whenever you leave the apartment, check if there are any lights on. Small acts like this are going to save the planet in the long run.

Think Well, Think Twice

The washing of bed linen and towels is one of the processes that most damages the environment. If you really think you need clean towels, of course, no problem. Every day we will provide fresh towels. But you can also call reception and ask for not to change them. Think about it, nature thanks you.

This is our commitment

We'd love to hear your
suggestions!
